DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114.
2. Applicant's submission filed on October 04, 2007 has been entered and made of record.

Response to Arguments

3. Applicant's arguments with respect to Amended Claims 1 – 61 have been fully considered and the prior art rejection has been withdrawn. However, amended claims are rejected under double patenting rejection with copending application 10/356,425. Examiner suggests filing a terminal disclaimer to overcome double patenting rejection.

Allowable Subject Matter

4. Amended Claims 1 – 6, 10 – 14 are allowed.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29

USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1 – 61 provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 – 26 of copending Application No. 10/356,425. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant case, all elements of instant claims correspond to the claims of the copending application claims, except in the instant claims a converter coupled to the processor and configured to convert the access code into acoustic sound waves encoded with the access code, the converter encoding the access code into the acoustic sound waves using multicarrier modulation, is referred in the copending application claims as an orthogonal frequency division multiplexing system coupled to the sound generator and the storage medium, the OFDM system configured to modulate the data into multiple audio wave carriers for transmission through the sound generator. It would have been obvious to one having ordinary skill in the art to recognize that an orthogonal frequency division multiplexing is a type of multicarrier communication technique (well known in the art) and the term

multiple sound wave carriers refers to the carrier signal in a multi-carrier, as disclosed in the copending application paragraphs [0023 and 0024].

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
